1. **What is Power BI Service and what is its main difference from Power BI Desktop?**
   Power BI Service is a cloud-based platform for sharing and managing reports. Power BI Desktop is mainly used to create and develop reports.
2. **What does the "Publish" process do and when is it used?**
   Publish uploads a report from Power BI Desktop to Power BI Service. It is used when you want to share and access the report online.
3. **What is a Workspace and what is its role in Power BI Service?**
   A Workspace is a collaborative area where users create, manage, and share reports, dashboards, and datasets.
4. **Explain the difference between a Dashboard and a Report in Power BI.**
   A Dashboard is a single-page view of key information. A Report can contain multiple pages and detailed interactive visuals.
5. **What is data refresh and why is it important for business?**
   Data refresh updates the report with the latest data. It is important for accurate and up-to-date business decisions.
6. **How does scheduled refresh work in Power BI?**
   Scheduled refresh automatically updates data at predefined times.
7. **What roles exist in Power BI Service (Admin, Member, Viewer) and what do they do?**
   Admin manages the workspace and permissions. **Member** can create and edit content. **Viewer** can only view the content.
8. **What is the difference between dataset sharing and report sharing?**
   Dataset sharing gives access to the underlying data model. Report sharing gives access mainly to the report and its visuals.
9. **What risks can occur when sharing dashboards with external users?**
   Risks include data leakage, unauthorized access, and exposure of sensitive business information.
10. **What happens in Power BI Service if the data source changes?**
    The refresh may fail if the source structure or connection changes. The dataset or connection may need to be updated.
11. **What is a gateway and when is it required?**
    A gateway connects Power BI Service to on-premises data sources. It is required when data is stored inside a company's local network.
12. **What can cause a refresh failure in Power BI?**
    Common causes are connection problems, changed credentials, changed data sources, gateway errors, or incorrect queries.
13. **You have a sales dashboard that must refresh automatically every day. What architecture would you use?**
    I would use **Power BI Service + scheduled refresh + gateway** if the data source is on-premises.
14. **A company CEO needs to see real-time data. How would you implement this in Power BI Service?**
    I would use **real-time streaming or DirectQuery** so the CEO can see the latest data without waiting for a scheduled refresh.
